Stakedemy Whitepaper

We are aware that education is key and necessary to build a better decentralized world, and what better way to provide this education than for free. However, free content is sometimes not valued or fully utilized.
That's why we developed Stakedemy: Stake to Learn and Earn academy, a gamified educational platform powered by liquid staking protocol tokens. Users must lock Near or Aurora tokens for a duration of 12 months to gain access.

Here's how it works:

1. Access to the academy is set in either $Near or $Aurora.

2. Users need to lock the required amount of tokens for 12 months on our platform.

3. Our contract takes those tokens and stakes them in the Metapool protocol to obtain $stNear or $stAurora, depending on the token the user deposited.

4. The liquid staking tokens are locked in our vault, and the rewards will be received by Stakedemy.

5. 70% of the rewards will be allocated to the gamification and incentive ecosystem for learning and development within the community.

6. 30% will go to Stakedemy.

7. At the end of the 12-month period, users can retrieve the tokens they had locked in our vault, minus a 3% commission, in addition to all the rewards earned within Stakedemy.

With this model, you continue to learn without spending capital, but you lock your tokens for 12 months, and a percentage of your returns is contributed to the gamification ecosystem. At the end of the period, you recover your locked tokens and the corresponding rewards for your efforts within the platform. This way, you commit, learn, and earn.
